

U.S.SAWS™

U.S.SAWS Bagger Vac Frame

The U.S.SAWS Bagger-Vac Frame is a unique way of converting the Ultra-Vac 1250 Dust Collector Series into an industrial bagging vacuum. The vacuum (or pre-separator) mounts to a steel chassis, and the bag is enclosed on three sides, protecting the bag from tears. The standard 1250 Series dust bin is then replaced with a distinctive cone-shaped bin with a flapper valve and bag holder.

Steel Frame

Large Wheels

Features

- Durable, steel frame made from tube steel
- Large wheels allow the unit to move over cords and other job site debris
- Allows you to convert the Ultra-Vac 1250 dust collection system into a bagger-vac system
- Compatible to use the Longo-Pack bagging system
