

U.S.SAWS 16 Flute Universal Beveler

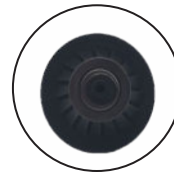

U.S.SAWS offers a NEW universal thread on beveler that easily attaches to a right angle grinder. The 16 Flute Beveller allows the user to bevel 6" to 16" of pipe in diameter. The beveler has been designed to eliminate the practice of using the side of an abrasive cut off blade. This is a cost-effective method when compared to cut-off blades. The attachment is easy to install and use; once attached, the user can efficiently bevel plastic pipe in or out of the trench. We also offer a variety of other beveling models depending on the application and make of the saw.

U.S.SAWS bevelling attachments allow for the operator to bevel **QUICKLY, SAFELY** and **EFFICIENTLY**.
